

Faisal Younis

Senior Software Engineer | Developer Productivity | Nasdaq Verafin

St. John's, NL, Canada | +1 (709) 699-9991 | fyounis.11@gmail.com

Portfolio & Projects

Professional Summary

- Nasdaq Verafin Senior Software Engineer with experience serving as a technical point of contact for enterprise technology operations, owning complex investigations and incidents, coordinating cross-functional resolution, and improving service delivery across financial-services software.
- Strong background in incident management, SLA-driven operations, KPI reporting, technical troubleshooting, and stakeholder communication, with a track record of translating complex technical issues into clear actions, priorities, and outcomes.
- Experienced partnering across engineering, QA, platform, and operations teams to manage technical escalations, improve client-impacting service reliability, and drive operational improvements; fluent in Arabic with firsthand familiarity with the Saudi business and cultural environment.

Core Competencies

- **Technical Client Partnership:** Technical point-of-contact support, issue clarification, impact assessment, stakeholder communication, expectation management, escalation coordination, and follow-through across engineering and operations teams.
- **Incident & Escalation Management:** End-to-end technical triage, impact and priority assessment, incident ownership within scope, escalation coordination, root-cause investigation, stakeholder updates, and service-continuity support.
- **SLA, KPI & Service Delivery:** SLA adherence, response-time tracking, priority management, case-health reporting, backlog visibility, incident trend analysis, operational risk identification, and management reporting on service performance.
- **Technical Investigation & Root Cause Analysis:** Hands-on analysis of logs, configurations, environments, CI/CD failures, build and deployment blockers, Linux systems, and AWS-hosted services; translate findings into clear and actionable engineering work.
- **Cross-Functional Leadership:** Coordinate engineering, QA, platform, and operations teams through complex technical issues, aligning ownership, priorities, technical evidence, expectations, and resolution.
- **Enterprise Platforms & Cloud Operations:** GitHub Enterprise, Jenkins, Git, Docker, Terraform, AWS EC2/Lambda/IAM/RDS, PostgreSQL, monitoring, access management, and platform troubleshooting.
- **Technical Training & Enablement:** New-hire technical onboarding, technical enablement for mixed audiences, knowledge articles, operational documentation, and repeatable support practices.
- **Financial Services & Post-Trade Domain:** Experience supporting Nasdaq Verafin Anti-Financial Crime software and financial-services technology; developing domain knowledge in CCP, CSD, clearing, settlement, and Tadawul market infrastructure.

Professional Experience

Nasdaq Verafin

Senior Software Engineer, Developer Productivity

St. John's, NL, Canada

Mar 2025 – Present

- Serve as a primary technical triage point for Developer Productivity operations supporting Nasdaq Verafin's Anti-Financial Crime software, assessing urgency and business impact, gathering technical evidence, and coordinating the teams required for resolution.

- Own technical investigations and incident coordination within scope for build, test-environment, deployment, and service-availability issues, including issues with potential impact to customer-facing services.
- Investigate complex issues across Jenkins, GitHub Enterprise, CI/CD pipelines, logs, configurations, Linux environments, and AWS-hosted services; translate technical findings into clear, actionable engineering follow-up.
- Built operational dashboards and an SLA/priority model that improve visibility into case health, backlog, response performance, and operational risk; present key metrics, trends, and service risks in weekly management meetings, with the approach being adopted by other Verafin teams.
- **Reduced monthly case volume by approximately 33%, from 1,200 to 800**, through automation and improved allocation of work to the teams best positioned to resolve issues.
- Lead continuous-improvement and AI initiatives across Developer Productivity, including specialist agents for GitHub pull-request review, QA-environment troubleshooting, developer-environment onboarding, and local-environment support.
- Delivered a developer-environment auto-setup agent that eliminated a recurring biweekly two-hour coordination meeting, reducing manual setup overhead and improving the developer onboarding experience.
- Administer GitHub Enterprise and Jenkins and serve as a go-to resource for new hires and colleagues on tooling, incident workflows, technical investigations, operational practices, and technical enablement.

Canada Revenue Agency

IT Infrastructure Support Analyst

St. John's, NL, Canada

Sep 2021 – Mar 2025

- Served as a primary technical contact for enterprise users across the Canada Revenue Agency and Canada Border Services Agency, translating technical issues into actionable resolutions while coordinating escalations across infrastructure and support teams.
- Managed a high volume of infrastructure incidents from intake through triage, prioritization, stakeholder communication, escalation, and closure while sustaining **97.8% SLA compliance**.
- Monitored system performance and critical alerts, assessed business impact, and escalated high-priority incidents through the formal incident-management lifecycle.
- Designed and automated IAM workflows, reducing manual access-provisioning time by **75%** while maintaining strict security and compliance requirements.
- Developed Python and PowerShell automation for case triage, log parsing, and health checks; created technical documentation that improved onboarding and cross-team support.

Education

Georgia Institute of Technology

Master of Science in Computer Science

Remote

Aug 2026 – Present

Memorial University of Newfoundland

Bachelor of Computer Science (Smart Systems)

St. John's, NL, Canada

Languages & Additional Information

Languages: Arabic (Fluent) | English (Fluent)

Saudi Arabia: Born and raised in Saudi Arabia; fluent Arabic speaker with strong familiarity with the local business and cultural environment.
